## About Us

Learn more about our goals →

**What is...?** [What is CCoE?](#)

This program is an initiative to modernize our applications, workforce and operating model. Applications will be moved into more reliable, available and secure cloud environments, with the most mission critical applications being rewritten to run/active across disparate geographic regions. Our talent will be deskilled and unskilled for cloud and DevSecOps. We will go from centralized IT to more nimble, agile, and independent application teams able to react to business needs and own their development operations.

## Our Tenets

1/4

### Remove Undifferentiated Heavy Lifting

We prefer managed services over rolling our own. Whenever possible we will use a managed service from the cloud provider so that we don't have to do the undifferentiated heavy lifting.

### Fails Happen, Design for It

We will design and test for failure to levels appropriate for the criticality of the application. We will use site reliability engineering principles as we go.

### Get Out of the Way

Allowing application teams to own their cloud adoption themselves, we decouple and decentralize development. We prefer to build guardrails, not gates. We automatically audit for compliance with those guardrails. While teams have some autonomy to choose their tooling, the tools and solutions must comply with security, regulatory, and availability objectives. We automate and codify preferred tools into simple, integrated experiences. We remove and deliberately avoid undifferentiated engineering effort.

## Let's Get Started!

The CCoE helps the teams transfer their culture, practices and technologies. Here are some quick links to get started.

### CCoE Starter Kit
